A Forum for You

The Ministry of Health's Oral Health team has launched the **Oral Health Forum**, to encourage greater sector engagement and clinical leadership in the oral health sector.

The **Oral Health Forum** is a micro-site of the recently launched Health Improvement and Innovation Resource Centre (HIIRC) – www.hiirc.org.nz.

Knowledge library

The Oral Health Forum is your first port of call for NZ-based research abstracts on oral health topics published since 2000 and international research on fluoride since 2006. The knowledge library is updated daily!

Share your information

- Share and discuss issues – your colleagues could have a solution for you.
- Share your successful (and not so successful) innovative service experience
- Read about what your colleagues around the country are doing.
- Post questions and comments.
- Support your colleagues' quality improvement and innovation activities.

Secure discussions and resources

Low-level oral health statistics, raw data and resources (artwork for mobile dental clinics) are also available for DHBs' use in planning and delivering services.

Meet up

Other activity on the Oral Health Forum includes the addition of important new functionality - an on-line meeting system which allows video and audio streaming called Meet-Up: Have a look, read the guidelines and consider this as an option for your oral health video-conferencing needs.

Make this forum yours! Register and get posting.
Share this flyer with a colleague.

Let's make it an active and relevant forum for all New Zealand oral health professionals.
